

Do you know who is doing what and when on **your** **network?**

A fast, reliable and well secured network is of crucial importance to any organization. **Flowmon is the answer to this challenge** using leading edge IP **flow monitoring technology** (NetFlow, IPFIX) to give you the best solution for network visibility. Go Flowmon and get everything you need to enhance the network & application performance and stop advanced cyber threats. Gartner recognized, Cisco and Check Point recommended.

Network Visibility

Troubleshooting, capacity planning, bandwidth monitoring, drill-downs, reporting...

Network Security

Network Behavior Analysis & anomaly detection for proactive security approach.

DDoS Protection

Volumetric DDoS attack detection and mitigation orchestration.

Network-based APM

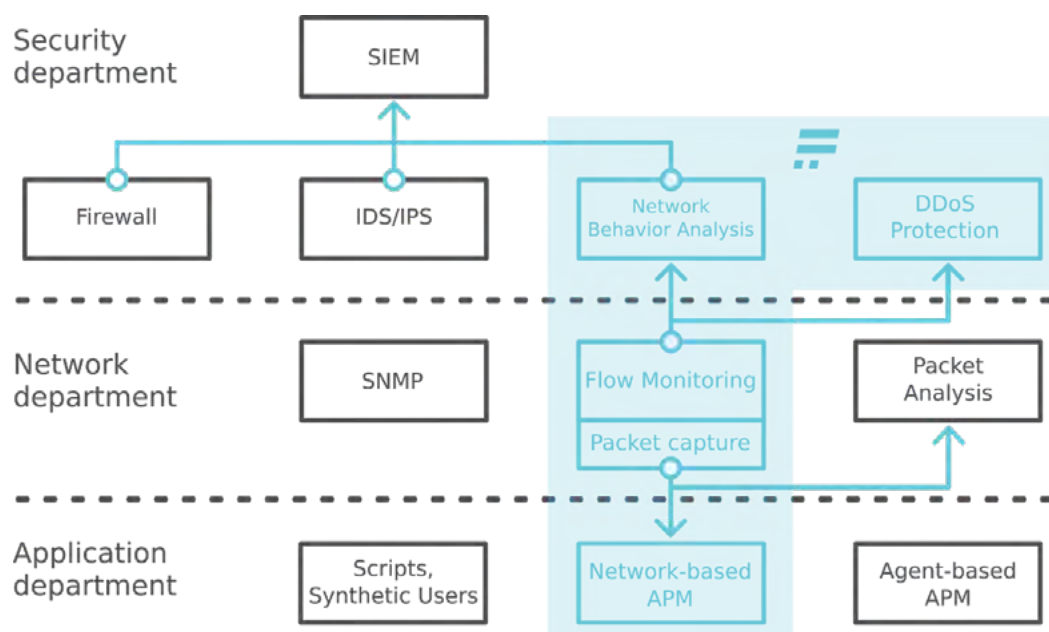

Application Performance Monitoring for real user experience measurement.

Manage and secure your network

Flowmon Solution

Performance issues, unavailability of critical applications, security breaches. These can cause financial loss, reputation damage, employee dissatisfaction and churn of customers. The Flowmon solution provides IT operations with a deep understanding of network and application behavior to avoid these situations. Based on performance, scalability and ease-of-use, Flowmon is trusted by companies globally, delivering them monitoring, diagnostics and analytics for optimizing performance of their infrastructure.

Flowmon is a comprehensive platform including everything you need to get an absolute control over the network through network visibility. With **Flowmon Probes** you will never miss any information about network traffic. **Flowmon Collectors** are dedicated for collection, visualization, analysis and long-term storage of network statistics. Flowmon modules extend the functionality of Probe and Collector to enable the advanced analysis of flow statistics. Visit dedicated websites to learn more about **Flowmon ADS** for network behavior analysis, **Flowmon APM** for driving user experience and application value, **Flowmon Traffic Recorder** for complete data communication recording and **Flowmon DDoS Defender**, a solution for the detection and mitigation of volumetric attacks.

Complete network visibility

Flowmon Collector provides network administrators and security engineers with a deep understanding of what is happening in the network. Use its powerful features to get absolute control over the bandwidth utilization, optimize network/application performance, troubleshoot quickly and keep the network protected against modern cyber threats.

Dominance over cyber threats

Flowmon ADS (Anomaly Detection System) is a powerful network security tool providing engineers with dominance over modern threats. Utilizing sophisticated network behavior analysis, an advanced artificial intelligence based on machine learning, it permanently observes and analyses data communication seeking anomalies and revealing suspicious behavior. Thanks to this ADS automatically eliminates risks that bypass traditional solutions such as firewall, IDS/IPS or antivirus.

DDoS protection

Unavailability of a critical customer application or a crash of the internal system as consequence of a DDoS attack can cause financial loss, reputation damage or security risks. Are you ready for DDoS?

Flowmon DDoS Defender is a scalable anti-DDoS solution. It leverages statistics from routers or dedicated network probes with an advanced network traffic analysis for real-time detection of volumetric attacks led against HTTP/HTTPS applications and systems. It provides the state of the art detection of DDoS, deep understanding of attack characteristics and a full-range of methods for successful attack mitigation.

Real user experience monitoring

Is your critical web application running smoothly? What if your customers face a slow response of your business application? What if you do not even know that your employees are struggling with errors when working with internal systems? How promptly do you detect an error and the root cause? **Flowmon APM** (Application Performance Monitor) solution proactively monitors your business critical applications from the end user perspective so you always know how they stack up. With no agents on servers, no changes in configuration. applications from the end user perspective so you always know how they stack up. With no agents on servers, no changes in configuration.

Protect

Operational and configuration issues are detected and identified immediately. Infrastructure is better protected against external & internal security threats.

Reduce MTTR

Quick troubleshooting and ticket resolution for network & security administrators.

Get Evidence

Proactive detection of threats, botnets, DDoS and other risks undetectable by firewalls, IDS and antivirus.

Analyse

Improving performance of business applications, enhancing user experience.

All in ONE

One comprehensive solution for NPMD, security, DDoS protection and network-based APM.

"Flowmon is a cost-efficient, flow-oriented NPMD tool that aims to meet the most demanding of performance and scalability requirements."

About Flowmon Networks

Flowmon Networks empowers businesses to manage and secure their computer networks confidently. Through our high performance network monitoring technology and lean-forward behavior analytics, IT pros worldwide benefit from absolute network traffic visibility to enhance network application performance and deal with modern cyber threats. Driven by a passion for technology, we are leading the way of NetFlow/IPFIX network monitoring that is high performing, scalable and easy-to-use. The world's largest businesses, internet service providers, government entities and even small and midsize companies rely on the Flowmon solution to take control over their networks, keep order and overcome uncertainty. Recognized by Gartner, recommended by Cisco, Check Point and IBM, Flowmon is one of the fastest growing companies in the industry.
