Defend your business values against volumetric attacks with

Flowmon DDoS Defender

Unavailiability of a critical customer service or a crash of the internal system pose a serious threat to any application-driven organisation. Flowmon DDoS Defender puts artifical intelligence between your systems and cyber criminals so you can avoid financial loss, reputation damage and security risks caused by volumetric attacks.

Flowmon DDoS Defender

Services always available

Flowmon DDoS Defender is a scalable anti-DDoS solution. It leverages flow statistics from routers or dedicated network probes with advanced network traffic analysis for immediate detection of volumetric attacks led against applications and systems. It provides state-of-the-art detection of DDoS, deep understanding of attack characteristics and mitigation orchestration using a full-range of methods (RTBH, BGP, PBR and Flowspec). Integration with 3rd party on-prem devices or cloud scrubbing services ensures stress-free mitigation.

Protection of high-speed networks and effective mitigation of DDoS attacks is one of the key challenges for Internet Service Providers and backbone operators today. Flowmon DDoS Defender is capable of protecting even 100G networks and it is fully prepared for multi-tenant environments. So, it is an ideal solution for ISPs to provide their customers with DDoS protection as a service (MSSP).

DDoS Defender is also great value to those, who wish or need to rely on their in-house solutions. Especially datacenters and enterprises who are among the most vulnerable to DDoS attacks. With DDoS Defender they are able to protect themselves from attacks bigger than their internet bandwith.

Get protected NOW

Visit **www.flowmon.com** to download the free trial and protect your network against volumetric attacks with Flowmon DDoS Defender.

Automation

DDoS Defender identifies an attack within seconds, extracts the characteristics and orchestrates mitigation actions.

Machine Learning

The Defender learns traffic characteristics to detect attacks while requiring minimum intervention. Manual thresholds are available to provide maximal flexibility.

Multitenancy

Differentiate your business to attract new customers with professional services powered by Flowmon. Define detection methods, mitigation rules and reports per tenant.

Compatibility

Robust and versatile architecture allows protection of any environment up to 100G networks. Integration with 3rd party mitigation appliances and scrubbing services ensures complete protection.

"Flowmon has completely transformed the way we deal with DDoS attacks – it has gone from being a very manual and time consuming process to being a fully automated solution with effective mitigation in under one minute."
