

Make your IT  
operations  
predictable  
with the  
ultimately  
scalable

# Flowmon Collector

A deep understanding of what is happening in the network is a key to ensure the smooth running and security of any modern organisation. Equipped with Flowmon Collector, IT experts get such a deep insight. They can troubleshoot quickly, optimize performance of the IT infrastructure and protect company wealth against modern cyber threats.

# Flowmon Collector

## Ensuring smooth network operations

Flowmon Collector is a powerful standalone appliance providing detailed network traffic visibility. The solution is dedicated for collection, visualization, analysis and long-term storage of network statistics (NetFlow v5/v9, IPFIX and other flow data) generated from routers, switches, firewalls or specialized Flowmon Probes.

With a well-arranged user interface Flowmon Collector allows administrators to have absolute control over the network to troubleshoot operational issues quickly, enhance network and application performance and deal with modern cyber threats.

Flowmon Collector is optimized for storing and processing high amounts of statistical data. Most importantly it saves your time by organising and presenting relevant information effortlessly. The intuitive dashboard presents the overall state of your network, application, cloud services and users, and also stresses the points of interest. This is available from your web browser, mobile application, or as an email report. If you want to know the root-cause, affected users, SLA breaches or who is responsible to sort out any problem, simply click to drill-down to any communication.

## Get absolute control over your network

Visit [www.flowmon.com](http://www.flowmon.com) to download the free trial of Flowmon Collector. Evaluate the functionality of the solution in your environment when receiving:

- Real-time network traffic monitoring and visibility
- Detection of operational and configuration issues
- Quick troubleshooting and ticket resolution
- Reduction in network implementation, operation and costs

## Fast Resolution

Find root cause with off-the-shelf dashboard or make your own. Click for deeper insight and drill-down to any communication. Get reports and alerts to reduce MTTR dramatically.

## True Flexibility

Have data always available with no aggregation, for unlimited periods. Up to 400k flows/s on a single device for analytics, performance and security.

## Broad Compatibility

Use your network as a sensor. Get flow data from standing routers, switches and firewalls. Deploy non-intrusively to any size, type and design of IP network at no additional costs.

## Ease-of-Use

Benefit from a complete portfolio of virtual and hardware appliances. Quick deployment and straightforward management enables you to monitor and secure your network with no extra skills.

*“The installation of Flowmon is very simple and intuitive. Thanks to Flowmon, we are provided with network visibility that we previously lacked.”*
