# Never miss any information with the world's most powerful NetFlow/IPFIX exporter

# Flowmon Probe

Do you know who is doing what and when in your network? With Flowmon Probe you will never miss any information about IP traffic communication. Take decisive actions to manage and secure your IT environment with high performance NetFlow/IPFIX exporters, which support even 100G wire speed processing.

# Flowmon Probe

## Traffic monitoring enabler

Flowmon probe is an essential tool for modern network traffic monitoring. The Probe is a high-performance appliance providing network engineers with detailed statistics on network communication in the form of IP flows (NetFlow v5/v9, IPFIX).

These flow statistics provide detailed and accurate information about who communicates with whom, when, how long, how often, how much data has been sent and much more information from the L2 – L4 layers.

This information is crucial to ensure network troubleshooting, network capacity planning, peering and SLA compliance, monitoring of users and devices, network security and other use cases.

Flowmon Probes do not affect network traffic in any way and overcome the limitations of generating flow data by routers and switches. Additionally, Flowmon Probes extend visibility with network performance and application layer monitoring which opens up completely new possibilities allowing administrators to identify performance bottlenecks, enhance user experience and deal with more complex network issues.

Flow statistics are exported to storage for further analysis by a Flowmon Collector or other NetFlow/IPFIX compatible application. Thanks to its monitoring capabilities, Flowmon Probe can resolve up to 95 % of all operational issues in the network.

## Get full visibility TODAY

Visit **www.flowmon.com** to download the 30-day free trial of Flowmon Probe. Get the full visibility and insight required to easily control your network.

## Outstanding Performance

Choose from a wide range portfolio of virtual and hardware probes for all kinds of IP networks, even the fastest 100G environments.

## Deep Insight

Track every communication in your network to streamline troubleshooting and reduce MTTR. Benefit from extended visibility across all network layers.

## Built-in Collector

Store and analyse network traffic statistics from the layers L2-L4 and L7. Unleash the analytical power of built-in flow collector to manage and secure your IT environment.

## No Intrusion

Deploy the Probe anywhere via broad link layer and tunneling protocol support. Probes are agent-less and transparent appliances with no impact on monitored infrastructure.

*"Flowmon has literally opened our eyes over enormous data volumes. Its simple and detailed control is epecifically designed for both administrators and managers too."*
